KEY: S/O = Special order
 N/A = Not available
 STD = Standard
 YES = Available as a standard option

All switches have a normal life of 100,000 cycles, but long life up to 500,000 cycles is available on special order.

All switches meet requirements of MIL-E-5400.

- 1 In fail-safe version the rotor returns to the initial position when current is removed. Holding current is required to keep the rotor in energized position.
- 2 Three port switch is SPDT. Four port switch is DPDT. (Transfer).
- 3 All switches can be pressurized to 45 PSI. the power shown is without pressurization. Typically 1.0 cu cm/min. leak rate.

- 4 Defined as the time from application of the switching current until specified RF performance is reached in the 90° position.
- 5 Current required for fail-safe type is 1.2 at 25°C for actuation and 0.5A at 25°C for hold WR137 thru WR284 2.0A. actuating. All AC drive circuits have diode limiters unless otherwise specified.
- 6 See figure 1 on next page for indicating circuit. All DC connectors are Bendix PT02H-10-6P, unless otherwise specified.
- 7 All switches are of aluminum construction with a chromate finish. Unless otherwise specified all switches are painted with a semi-gloss blue paint per FED-STD-595.
- 8 Flanges conform to MIL-F-3922.
- 9 Isolation greater than specified on special order.
