

Transformers Waveguide

Waveguide transformers provide the means of propagating RF energy from one waveguide size to another. This transmission may be achieved by smooth tapers or stepped configurations. Reflections encountered within these transformers are kept to a minimum over the frequency range common to both waveguide sizes.

Methods of manufacture include casting, fabrication, and electroforming, depending on the material required and the waveguide sizes.

Notes: M = Mandrel. F = Fabricated. SC = Sand Casting. S = Smooth Taper. X() = Step Transformer (No. of Steps)

* Cover Flanges

¹ Supplied in copper alloy only

² Supplied in aluminum alloy only

³ Dimensions shown are for cover flanges, both ends.

When using choke flanges extra length may be added.

Check with the factory for proper dimensions.

Aluminum flanges when required will be equivalent to the brass flanges shown.

All flanges tabulated are brass except where noted.
